# 1. Initialization file (INI - Datei)

The initialization file (INI file) is a configuration file for various software.

Fig. 1 Example

# 2. Preparation

Please provide us with the following photos (*if not already done*):

Rear view of the touch panel:

Fig. 2 Example TouchPanel

Side view of the touch panel with the SD card slot:

Fig. 3 Example Slot

Photo of the radio remote control (if available):

Fig. 4 Remote control with 12 buttons

Fig. 5 Remote control with 15 buttons

#### If available, please always specify which type of frequency converter was installed Series 8400 or i550

In order to program the touch panel we need the following data from you:

- IP address of the touch panel (in case of special connection such as Modbus, Profibus, Profinet,...)
- Information about the connection
- INI files

# 3. Execution

## 3.1 General information

These instructions will enable you to install an auto-installation file on your device yourself in just a few simple steps. You can use this file to perform a data/parameter backup, even if the monitor is damaged (but the computer is still active). If Fliegl Support receives these parameters from the customer, they can load a new device with customer data. You then only need to convert the device.

Postpone the import of the file to a time when the device is not in operation. In particular, all drives will switch off during the import, and the control system will not function. Communication with higher-level systems will also not function during the import.

Please follow the steps precisely; in particular, make sure that you adhere to the waiting times specified and do not remove the USB stick too early.

You will need:

- A PC/laptop etc. running Windows XP or later; (Vista and Windows 7 are also OK)
- You need an <u>empty</u> USB stick which may be max. 4 GB in size (larger USB sticks also work in rare cases)

### 3.2 Receiving the file

Please follow the steps below on a Windows PC

Download the following file onto the stick:

https://support.fliegl.com/file/CopyAlltoStick V 2018 10 29 12 47.exe

Depending on your operating system, the file will look like this:

CopyAlltoStick\_V \_2018\_10\_29\_\_ 12\_47.exe

If your computer prevents the download process of the installation file or blocks access for security reasons, this may be due to your firewall. To solve the problem, you may need to change the firewall configuration.

## 3.3 Copying the file onto the USB stick

Please follow the steps below on a Windows PC

Plug the USB stick into your computer. If the message

appears, select the option:

You should now see the USB stick:

						7
Com > Wechseldatenträger (	• 49	Wechseldatenträge	er (H:)	durc	hsuche	n 🔎
Organisieren 👻 Freigeben für 👻 Neuer Ordner				•		0
✓★ Favoriten ■ Desktop Downloads ⊠ Zuletzt besucht	Dieser	Ordner ist leer.				
<ul> <li>Z Bibliotheken</li> <li>S Bider</li> <li>Dokumente</li> <li>J Musik</li> <li>S Videos</li> </ul>						
Ecomputer     System-reserver     Concentration     System-reserver     Lokaler Datentration     Concentration     Wechseldatentra						
0 Elemente						

The USB stick must be empty.

Now save the downloaded file onto the USB stick:

## 3.4 Extracting the file

Now double-click on the file with the left mouse button:

27-Zip self-extracting archive	×
Extract to:	
Extract	Cancel

Under "Extract To", the drive letter of the USB stick should appear. Now click (left mouse button) on "**Extract**".

58% Extracting			
Elapsed time:	00:00:01	Total size:	6908 KB
Remaining time:	00:00:00	Speed:	3709 KB/s
Files:	0	Processed:	4050 KB
Compression ratio:		Compressed size:	
	Background	Pause	Cancel

You should now see the following screen:

The part of the process requiring the use of a PC is now complete.

## 3.5 Import file into TouchPanel

Go to the Touch Panel and switch off the power supply<sup>\*</sup> (Touch Panel must be without power). Insert the USB stick into the Touch Panel and then connect the power again.

Automatic saving on the USB stick begins.

After about **5 minutes** it will completed and the stick can be removed from the touch panel.

\* If you do not have a switch, unplug the mains plug

Fig. 6 USB slot

## 3.6 Send result to Support Team

Plug the USB stick back into the PC

Open the USB drive, it should look like this:

<mark>→   ♥ ↓ </mark> →   Datei Start Freigeb	Verwalten Den Ansicht Laufwerktools	USB-Lauf	werk (E:)
