

# Operating instructions

## Part B main screen overview

We are Fliegl.

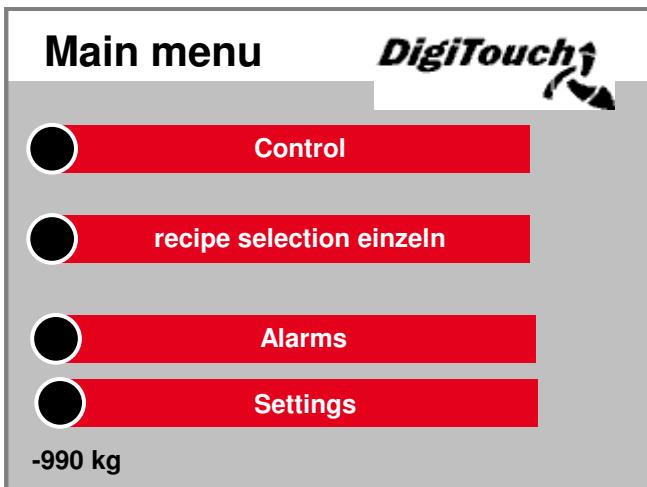

**LastChangedRevision: 19165**  
**LastChangedDate: 2016-07-05**

# Start screen

To greeted DigiTouch concrete.  
Tap "START"  
to access the main menu.

## Main menu

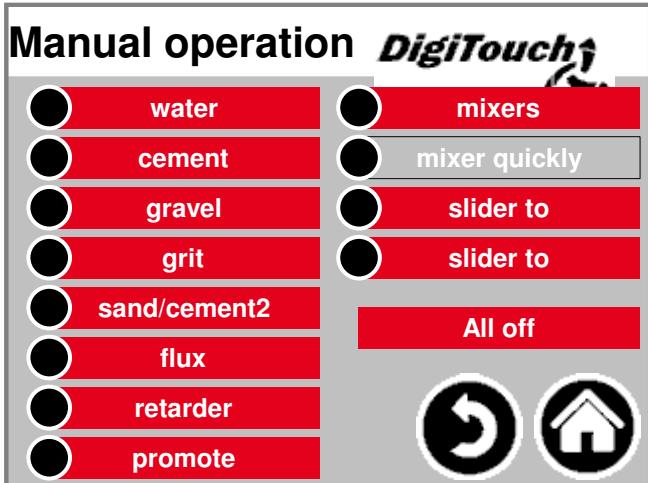

This is the main menu. By Press the "Home" icon on the bottoms come any time back here. If you want to control the Conditioning, for recipe selection, the Alarms and settings navigate.

## Menu control

In this menu, you can Automatic and manual operation swap, and select. Of the selected mode is color deposited. Pressing the enters the currently selected mode one in the control of this mode. The mode can only be be changed if the Engine is stopped.

# manual

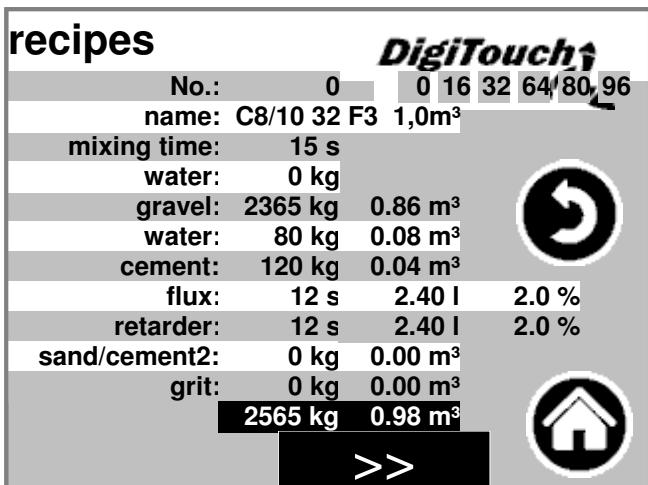

This mask allows manual operation of the individual Drives. Here you can manually switch the individual functions. Some are as buttons, some as Switch realized. Please make in dry run with the Control familiar.

## Automatic mode

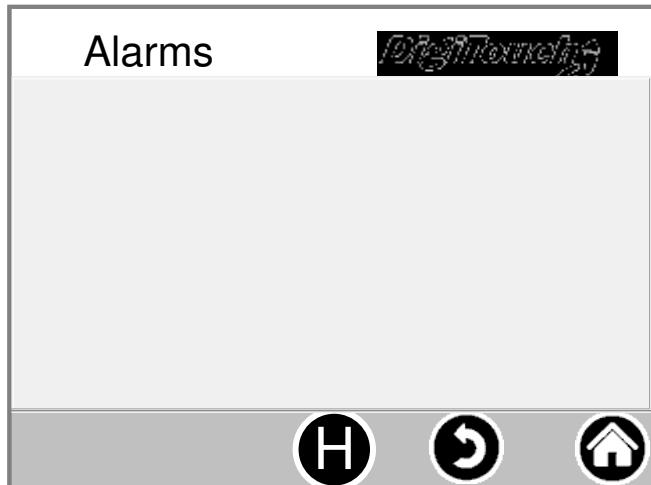

Automatic recipe sequence:  
Do this by pressing "Start". Look at Display the debit and actual quantity from the pebble. After reaching the Gravel amount calculated control the target amounts for water and Cement based on the actual Gravel weight again and dosed this automatically.

## recipe selection

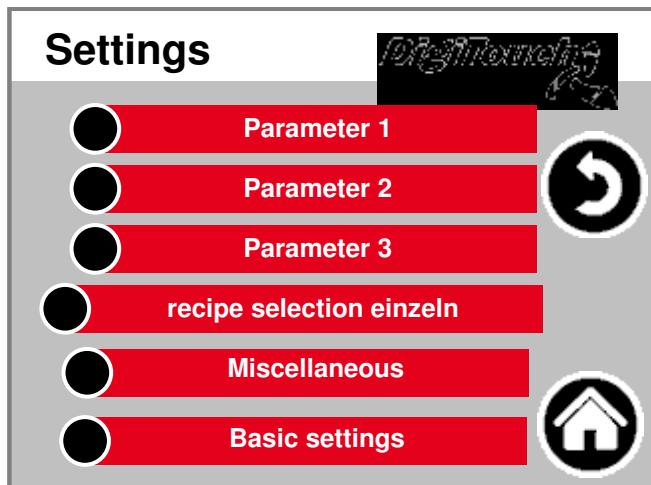

The currently selected recipe Automatic operation is gray deposited. Pressing the Recipe number, a one Select another recipe. Pressing the recipe names or its kg values ??or the Mixing time can change will.

# Page alarms

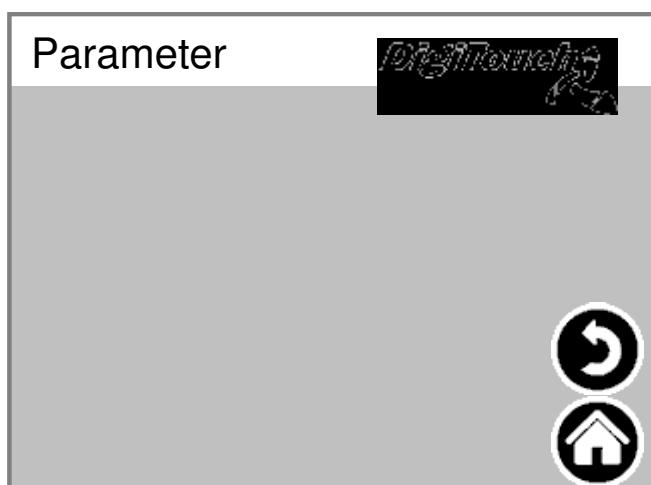

Here are the current Alarms. Alarms not are out of date, disappear immediately from this list. alarms have not confirmed or acknowledged will. An exception are certain versions of FU. With the button "H" can be a History of past alarms are displayed.

# Settings

In this menu, the system be configured. To the individual points can be found below each one separate description.

# Parameter1

todo

# Parameter2

Parameter	Digimixing
waiting period	10 s
Weight Stop ok	200 kg
liter/min 0	12.00 l/min

Timeout: Time between the automatic doses of gravel, Water and cement  
Weight Stop ok: stop threshold when finished concrete  
Tracking automatically: automatic Adaptation  
Trailing water, cement: manual or automatic values ??of overrun quantity

# Miscellaneous

The various CAN devices:  
from above: CAN master analog  
output FU1 .. FU4  
The states in detail:

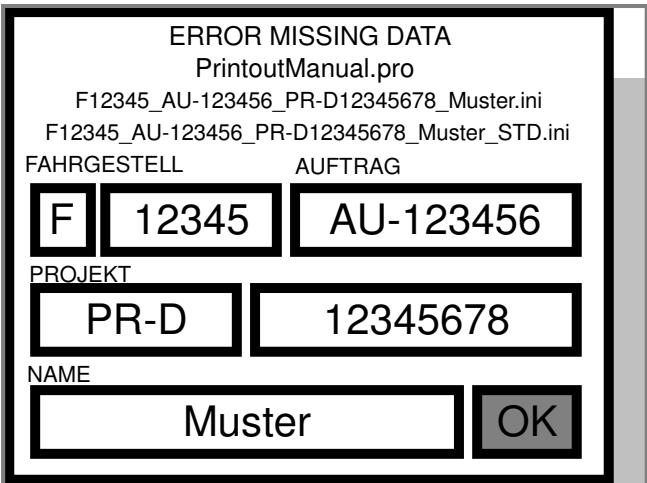

**MASTER:** Status 0,1,2: The will of the Master automatically and in the first cycles after a SPSSStart through. Status 3: Status 3 of the master for some time maintained. Status 5: Status 5 is for the master the normal operating state. **SLAVE:** Status -1: The slave is the NMT message [Reset Node] reset and change independently in the state 1. State 1: The slave replaced after a maximum time of 2 s, or Immediately after receiving his bootup message in status 2. Status 2: The slave to change a delay time of 0.5 sec automatically in the status 3. This time corresponds to the experience, that many CANopen devices ready immediately are to receive their configuration SDOs, after they sent your Bootup Message have. Status 3: In state 3 the slave is configured. Slaves with during Configuration phase of a problem, remain in state 3, or go to the Configuration phase directly in an error state (State> 5). Status 5: Status 5 is the normal Operating state of the slave. Status 97: A Node goes to state 97 when he optional is (Optional device in the CAN Configuration) and not according to the SDOAnfrage has the object 0x1000 responding. Status 98: A Node goes to state 98 if the Device Type (0x1000 object) is not the Configured type corresponds.

# Defaults translated

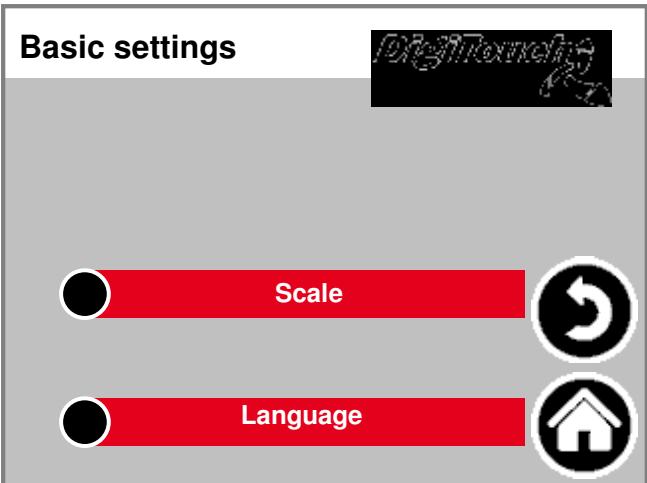

Set the  
Standard values ??the current ones.  
PIN-protected:

# Operator

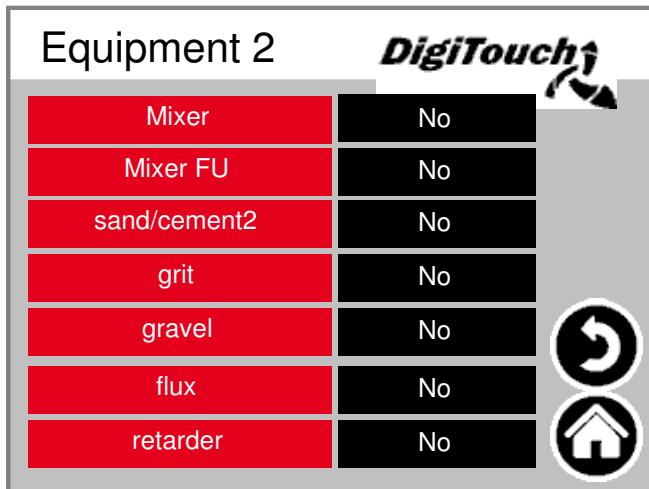

Chassis and commissioned  
number

# Menu default settings

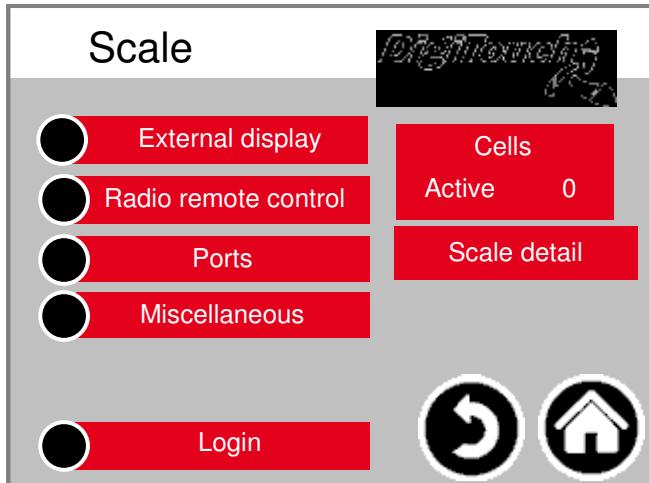

In this menu,  
very basic settings  
be made. Usually  
not required by the user!

# Equipment

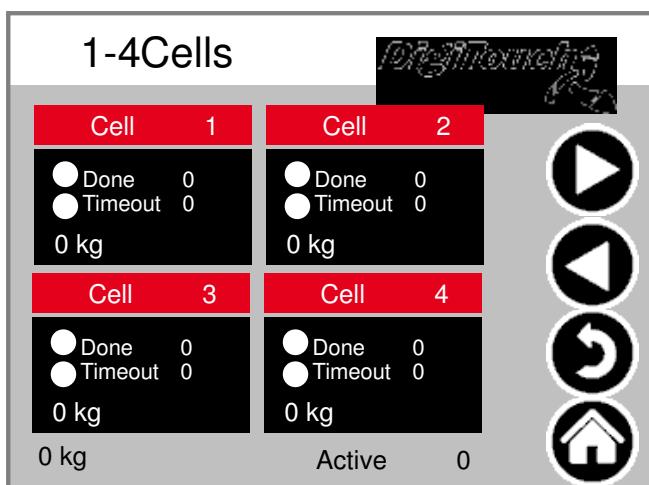

Selection of mixers with or without Frequency converter (FU).

# Scale

Overview Menu provides Access to all setting and Diagnostic scale functions.

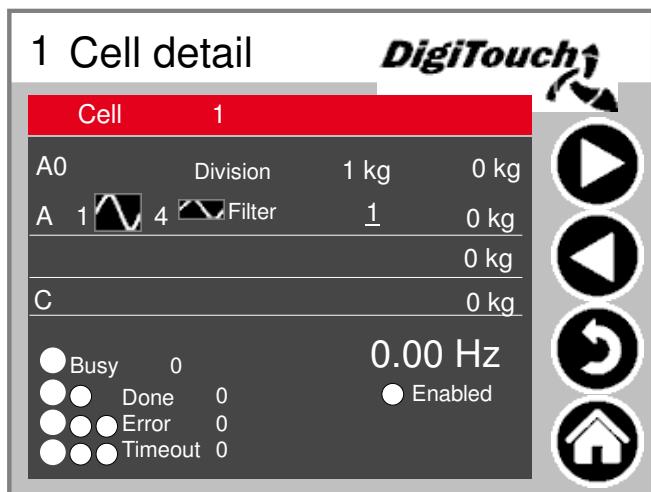

# cells 1-4

Overview of 4 cells each.  
Scroll arrows. tap box  
to enable beams to touch  
to reach details.

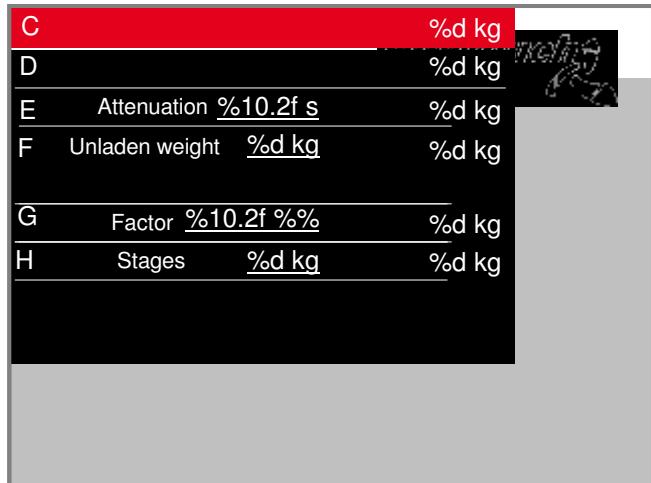

# Cell 1 Detail

ident (2 ff)

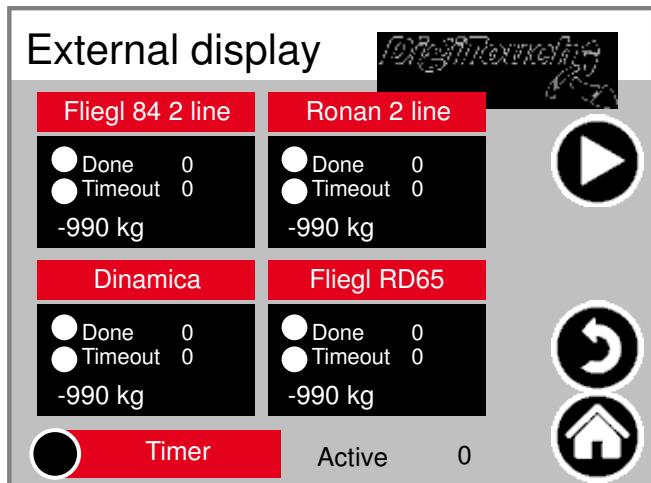

Detail menu among others setting minimum / maximum load of cells; Filter A and C

## Settings scale all

maximum and minimum  
Scale capacity; Total filter;  
increment

## display 1-4

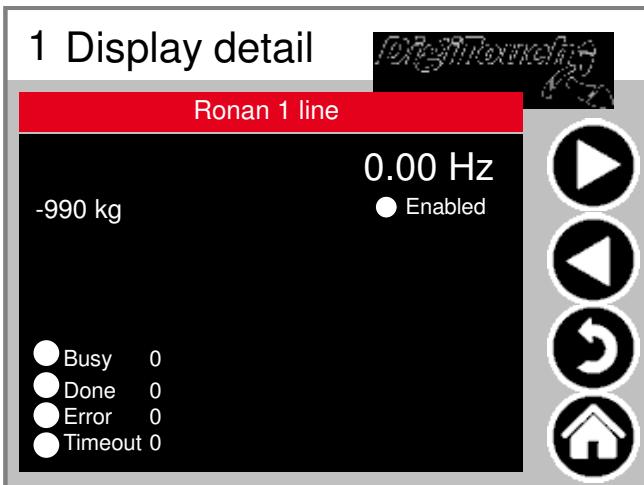

Enable the external Displays. WARNING: Some require restart after setting this setting.

# display 5-8

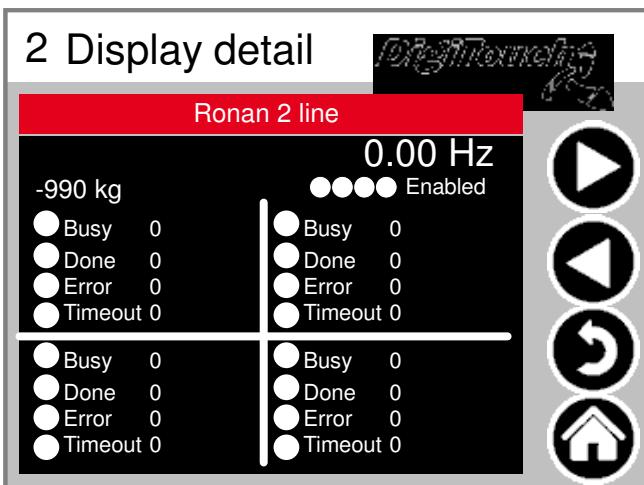

Enable the external Displays. **WARNING:** Some require restart after setting this setting.

## Display 1 detail (1 line)

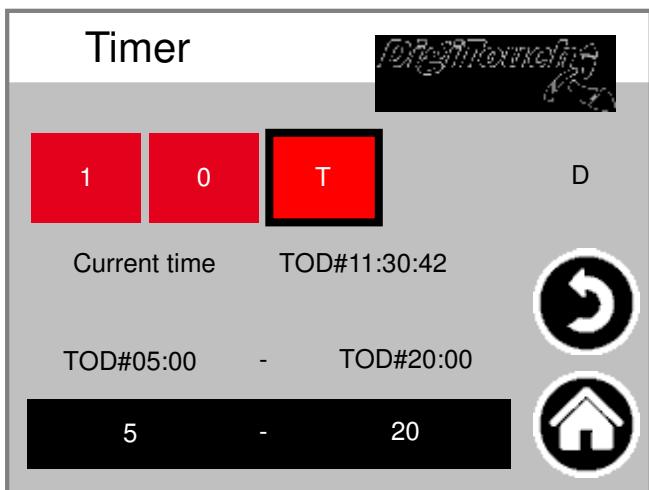

Detailed view of the display for all 1-line display provides the Mask like this (1 data area)

## Display 2 detail (2 lines)

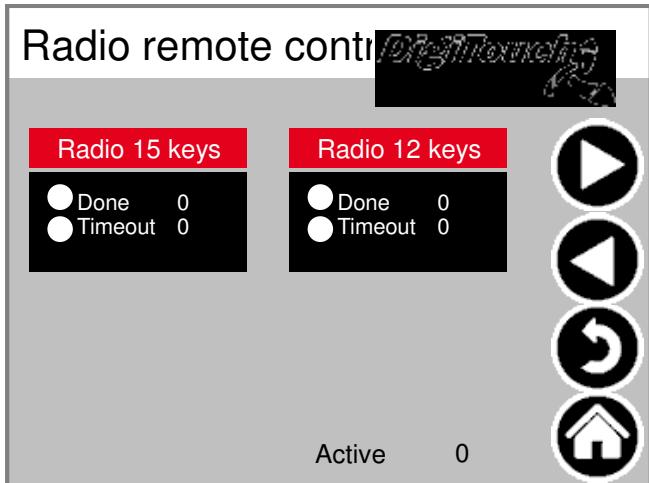

Detailed view of the display for all 2-line display provides the Mask like this (4 data areas)

# Timer

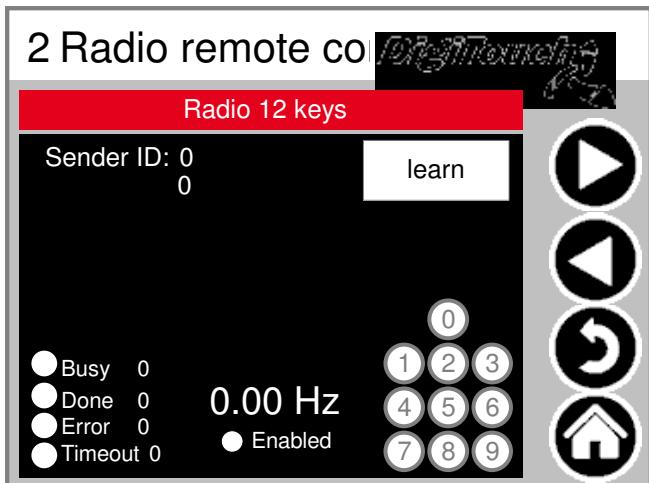

Here, a night service will be realized. (T) or Continuous operation (1) or Continuous (0)

# Radio remote control

Overview remote controls currently only 1 type. tap box  
Tap to activate beams to reach details.

# Radio remote control detail

Closeup radio. The Serial number is hierdurch "learn" stored! Give 3 circles Condition of 3 upper keys.

# COM ports

Ports	DigitalWeighing
COM1	9600
COM2	2400
COM3	9600

Display of the baud rates of 3 COM Ports. For diagnostic purposes!
